Paper Title
The Nucleus of a Multiprogramming System
The UNIX Time-Sharing System
Exokernel: An Operating System Architecture for Application-Level Resource Management
HYDRA:The Kernel of a Multiprocessor Operating System
The Performance of p-Kernel-Based Systems
StarOS, a Nlultiprocessor Operating System for the Support of Task Forces
Application Performance and Hexibility on Exokernel Systems
On μ-Kernel Construction
seL4: Formal Veri cation of an OS Kernel
The Structure of the "THE"-Multiprogramming System
Unikernels: Library Operating Systems for the Cloud
Rate Monotonic vs. EDF: Judgment Day
Real-Time Dynamic Voltage Scaling for Low-Power Embedded Operating System
Lottery Scheduling: Flexible Proportional-Share Resource Management
Stride Scheduling: Deterministic Proportional-Share Resource Management
Arachne: Core-Aware Thread Management
Implementing Lottery Scheduling: Matching the Specializations in Traditional Schedulers
Microservices The Journey So Far and Challenges Ahead
The Working Set Model for Program Behavior
WSCLoca - A Simple and Effective Algorithm for Virtual Memory Management
The Multics Virtual Memory: Concepts and Design
Practical, transparent operating system support for superpages
Implementing Global Memory Management in a Workstation Cluster
Machine-Independent Virtual Memory Management for Paged Uniprocessor and Multiprocessor Architect
Virtual Memory Management in the VAX/VMS Operating System
Implementing Lightweight Threads
Why Events Are A Bad Idea
Monitors: An Operating System Structuring Concept
Experience with Processes and Monitors in Mesa
DTHREADS: Efficient Deterministic Multithreading
RCU Usage In the Linux Kernel: Eighteen Years Later
Read Copy Update
Scheduler Activations: Effective Kernel Support for the User-Level Management of Parallelism
SEDA: An Architecture for WellConditioned, Scalable Internet Services
Wait-Free Synchronization
A Fast File System for UNIX
F2FS: A New File System for Flash Storage
Scale and Performance in a Distributed File System
Ceph: A Scalable, High-Performance Distributed File System
The Google File System
The Hadoop Distributed File System

Windows Azure Storage: A Highly Available Cloud Storage Service with Strong Consistency
BlueSky: A Cloud-Backed File System for the Enterprise
Cumulus: Filesystem Backup to the Cloud
Differential RAID: Rethinking RAID for SSD Reliability
The Distributed V Kernel and its Performance for Diskless Workstations
The Sprite Network Operating System
The LOCUS Distributed Operating System
Experiences with the Amoeba Distributed Operating System
DieCast: Testing Distributed Systems with an Accurate Scale Model
LegoOS: A Disseminated, Distributed OS for Hardware Resource Disaggregation
Medusa: An Experiment in Distributed Operating System Structure
The V Distributed System

Topics

OS History and Architecture
Scheduling
Memory Management
Threads, Events, Concurrency, Synchronization
Storage and File Systems

Distributed Systems
